

# LEVERAGING THE PACT ACT

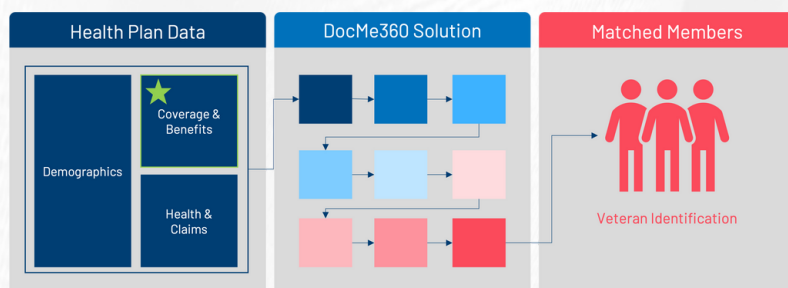

Helping private health plans maximize VA benefit utilization for their veteran populations.

## OVERVIEW

More than **1 million veterans** have dual health care coverage through both the VA and a private health plan. Despite this sizeable population, very few private plans have the adequate infrastructure to identify this population and, more importantly, ensure their veteran enrollees are accessing all available benefits through the VA.

As a subject matter expert on VA processes, DocMe360 has the tools that private plans need to maximize benefits for their veteran enrollees.

## DOCME360 APPROACH

## OPPORTUNITIES

### 1. Identify the veteran population

DocMe360 verifies that private plans have accurately identified their veteran population and implement the necessary infrastructure for ongoing verification.

### 2. Ensure maximum benefit utilization

Leveraging health plan COB files, DocMe360 identifies when veterans are not maximizing benefit utilization through the VA.

### 3. Design veteran-specific programming

DocMe360 supports the development of veteran-specific programming to help private plans attract and retain veteran enrollees.

## AT A GLANCE

With enhancements to legislation, veterans have greater access to health care than ever before.

Private health plans require updated infrastructure to ensure their veteran enrollees are maximizing these benefits through the VA.

## ABOUT DOCME360

DocMe360 is a premier digital strategy firm and trusted advisor to our country's most prominent institutions. Based in Washington D.C., we provide innovative solutions to drive enterprise-wide growth across the healthcare, benefits, hospitality, policy, transportation, food security, and information technology industries.
